INFORMAZIONI DI DETTAGLIO SUL PROGRAMMA FORMATIVO

RAZIONALE

La Microbiologia clinica è una disciplina finalizzata allo studio, alla diagnosi ed alla terapia delle malattie dell'uomo causate direttamente o indirettamente da microorganismi. Il fine ultimo di questa attività è quello di garantire ai clinici gli strumenti necessari per eseguire una diagnosi sicura in tempi rapidi, attuare una terapia mirata e, eventualmente, pianificare e mettere in atto una serie di procedure atte ad impedire il diffondersi delle infezioni.

Il microbiologo ha anche una importante responsabilità nella interpretazione dei dati microbiologici, che dipende da diversi fattori quali ad esempio la qualità del campione, la valutazione del microrganismo isolato come patogeno primario o opportunisto, il sospetto clinico o l'ipotesi diagnostica, le condizioni immunitarie del soggetto al momento del prelievo.

Il corso e-micro learning intende affrontare alcune tematiche attuali della microbiologia clinica con una modalità di formazione interattiva teorico-pratica, allo scopo di migliorare le competenze dei microbiologi e per aprire un confronto costruttivo sulla possibile risoluzione di problemi aperti che non trovano al momento una linea guida di indirizzo scientificamente validata.
